***Status of the Claims***

Claims 1-25 have been presented for examination.

***Election/Restrictions***

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-14, drawn to a method of generating biospecific markers for fungi with MS.

Group II, claim(s) 15-21, drawn to drawn to a method of determining the genus, species or strain producing a compound by comparison to known biomarkers.

Group III, claim(s) 22-25, drawn to "a library" of biospecific markers for which there are no specific types or molecules that are required.

The inventions listed as Groups I-III do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

The methods of Groups I and II are at opposite ends. Group I is a method of compiling information about known genera, species strains, while Group II requires comparison between collected information a compound and known compounds, i.e., a lookup able that has already been generated. Since no specific compound, genera, species or strain is required for either

Art Unit: 1651

grouping, there is no clear common special technical feature that they share. If the biospecific marker identified by Group I corresponds to known compound, then it would destroy unity of invention because the biospecific marker would not provide a contribution over the art.

While the library of Group III could be compiled from multiple repetitions of the method of Group I on a range of genera, species and strains, the library is open-ended, there is no minimum or maximum number of genera, species or strains that may be included let alone their corresponding biospecific markers that may be included. There is reason why other methods of obtaining biomarkers, even those involving MS data could not be obtained by other means. For example, isolating specific compound types, e.g. fatty acids, separating them on GC and then obtaining MS data other than MALDI-TOF. The biospecific markers could be identified by other spectroscopic means.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
